INTRODUCTION

For over 30 years Delfasco has been a manufacturer of choice for the U.S. Armed Forces, producing quality products in support of many branches of the U.S. Department of Defense. Delfasco clients also include some of the world's largest defense contractors, including Lockheed Martin, General Dynamics, ATK, and BAE Systems, as well as foreign military forces from around the world.

THE COMPANY

Our precision manufacturing process has satisfied sophisticated clients for over 30 years. In fact, we have received repeat business from the U.S. Army at Rock Island since the company was formed. Our fabricating facility and expertise includes streamlined capabilities for stamping, welding, machining, finishing, and assembly. We maintain a complete range of support functions to augment our production capabilities, including managing statistical process control, meeting all customer requirements for quality performance, and exceptional customer service and support.

PRODUCT EXAMPLES:

25 lb. Practice Bombs

The military standard 25 lb. practice bomb is used as a training aid for all Air Force and Navy pilots. With various bomb rack configurations, they are used on

almost every fixed-wing fighter/bomber aircraft in the U.S. inventory. Commonly referred to as the MK-76 or BDU-33, practice bombs utilize a spotting charge that releases a cloud of smoke on impact. These practice bombs are used to simulate the MK-82 (snake eyes) in low drag configuration. They are machined from cast-iron and steel as a non-explosive ordinance that is used in training to simulate actual bombs as well as to qualify systems and personnel.

Suspension Lugs

Suspension lugs are the foremost method for attaching bombs, rockets, pods, and fuel tanks to fixed-wing and rotary aircraft. Our lugs are available in a variety of different military specifications as well as various commercial and industrial applications.

Pallets and Pallet Containers

Steel pallets (and adapters) facilitate improved mobility of critical munitions. They are the shipping components of the Fastpack Munition Design and offer secure, convenient storage and ease of

loading and unloading of munitions. Delfasco's munition pallets and adapters have undergone military lab testing and are recommended for use by the U.S. Army. A copy of the lab reports is available upon request.

Conical Fins

Conical Fins (aka Slick Fins) are general purpose fin assemblies for the MK-80 (snake eyes) series Low Drag General Purpose (LDGP) bombs. Delfasco specializes in the stamping, machining, and finishing of these fin assemblies.

Slick Fins and subassemblies are fabricated from steel, cut, formed, machined, assembled, and welded to drawing requirements.

Ammunition Containers

Ammunition containers are used for the transport and storage of various munitions (with particular sensitivity to temperature and humidity), such as propellant charges, tank rounds, and artillery rounds. Delfasco produces a dedicated line of

cylindrical and square bell containers built to U.S. Military specifications. We can also modify our line to meet custom specifications. Our containers are specially designed for use by the U.S. Military and are sold directly to the U.S. Military or the private sector.
